

2-Optical-4-Electronic Transceiver Module

Overview

At its core, an 800G OSFP 2*FR4 transceiver is a hot-pluggable optical module designed for 800 Gigabit Ethernet links. Unlike traditional single-channel modules, the "2*FR4" designation indicates that the module contains two independent 400G FR4 optical engines. Each module integrates eight electrical and eight optical channels operating at 106. The 800G OSFP 2*FR4 optical transceiver represents a pivotal shift in high-density networking, providing the necessary bandwidth to support the explosive growth of artificial intelligence and machine learning workloads. ts for data communications applications. Starting from the "core", the. Designed for high volume deployments, this transceiver delivers 500-meter reach while significantly reducing power consumption.
