

AOC Active Optical Cable Testing Standards

Overview

UL 2404, the Outline of Investigation for Active and Passive Optical Cable Assemblies and Connectors, is used to guide the safety evaluation of AOC assemblies. Active optical cables (AOC cables) are the go-to solution for high-speed links in data centers, HPC clusters, and enterprise networks. UL Solutions, one of the world's most trusted names in third-party product safety certifications, offers communications. Today, the Active Optical Cable (AOC), especially parallel multi-lane cables using QSFP+ modules, is one of the most important devices used by high-speed interconnects, such as InfiniBand, and accurate cable testing is necessary to ensure reliable data transmissions and interoperability. This enters because the connectors are permanently attached.
