

# How many volts is an outdoor electrical distribution box in Germany

## Overview

Just like the rest of Europe, the voltage in Germany is 230 volts and the frequency is 50 Hz. Germany has standardized on type F sockets and plugs. Plug F is commonly. ☐☐

Quick Answer: An outdoor electrical junction box is a weatherproof enclosure where electrical wires connect or split, required by code to protect connections from moisture, provide safe access for maintenance, and prevent electrical hazards in exterior applications. This is the same as across Europe and the UK, as well as Australia, New Zealand and much of South East Asia and the Middle East. However, if you're from the US, your devices will run on a significantly lower voltage. You can check your country's. Germany uses Type F power sockets, known as Steckdose (socket) with a Stecker (plug), operating at 230V and 50Hz. I learned this the hard way in 2019 in Freiburg, when a friend. SCHELL fittings are designed and manufactured according to the technical norms and regulations valid in Germany and - where generally available - in Europe and at an international level.
