

How to set up fiber optic cable on a Huawei panel

Overview

Pull the optical fiber and power cable out of a junction box (86 mm), route them through the square hole in the middle of the mounting bracket, and secure the mounting bracket to the junction box. Install an optical module on the AP. Figure 2-1 Cable connection diagram The fiber connector connected to the optical port on the wall varies depending on actual conditions. There is a row of ports/button at the rear of the device. The ports/button are displayed from left to right. Essentially, there are four crucial steps to installing aerial optical cables correctly: knowing the tools and materials, the installation hardware, optical cable reservation and FAT installation. Fiber transmits data using light signals through glass strands, delivering faster speeds and lower latency than cable or DSL connections that rely on copper. The device can transmit upstream data over optical fibers. During construction, onsite cable connection is required.
