

Micro-module installation not working

Overview

Yes, just download the new APK (in the normal variant, not -hw or -lh) from microG GitHub, download page or microG F-Droid repo (all those use the exact same APK files!) and install it as you always would without reflashing the module. If you use Companion, update it. It can install MicroG and other stuff into your system partition or as a Magisk/ KernelSU module. It supports virtually all mobile architectures (arm/64, x86/64, mips/64) and fully supports KitKat and above. It can also (mostly) support much older versions, but sync adapters and some location. This is a Magisk module - originally based on Hieu Van's microG Installer - that installs microG GmsCore, GsfProxy and Companion (or Play Store if you want so) to /system/priv-app. GsfProxy. Hello, I installed a de-google ROM, on top later I flashed magisk and later MicroG, also a magisk module to be able to use unsigned certs or something like that called SmaliPatcher. but still for example some apps like UBER or even openstreetmaps OsmAnd etc are not working. How to install MicroG?

My tablet is using android 4. Can i use TitaniumBackup to uninstall Google Play Services or i need to. This branch is 6 commits ahead of nift4/microg_installer_revived:master.
