

## Network rack port connection method

### Overview

Use SFP+ DAC cables or fiber (LC-LC) for switch-to-switch uplinks instead of copper RJ45 patch cables for lower latency and heat. Avoid tight cable bundling with PoE++ loads. Follow TSB-184-A standards for loose bundling to prevent overheating. Network racks are designed to house switches, routers, patch panels, and other structured cabling system local area network (LAN) gear to facilitate connections to and from the server racks. Step-by-step guide: In this way, patch panels, switches, cable routing and documentation are. This guide covers the technical requirements for modern rack deployments: Cat6A cabling for multi-gigabit infrastructure, thermal dissipation for high-power PoE devices, proper rack depth planning, and SFP+/DAC uplink configurations.
