

# No internet speed after connecting to fiber optic router

## Overview

Power cycling or restarting your ONT (Optical Network Terminal) often resolves simple troubleshooting internet issues. Use the table below to see expert-recommended first steps for fiber troubleshooting. This guide will walk you through diagnosing and resolving common. With upload and download speeds that often exceed 1,000 Megabits per second (Mbps), fiber optic internet has the capacity to provide a seamless online experience while powering all of your connected devices at once. So, when your fiber internet doesn't deliver, it can be a huge letdown. I was expecting dl speeds of 900+ on wired connection and 600+ on wifi when close to router, what I am getting is 100 (dl) on wired and max of 350mb on wifi when sitting on top of the router, other rooms in my apartment are getting. When your fiber optic network stops working, begin with a structured approach. First, check the basics—look for power issues on your optical network terminal and inspect all cables for visible damage.
