

Sri Lanka Bridge Railing Lights

Overview

Sri Lanka Bridge Railing Lighting is a lighting system integrated into Sri Lanka Bridge Railings. These lighting solutions provide a safe environment for pedestrian and vehicle traffic, while increasing the aesthetic appearance of the bridge. It adapts to the architectural design of the bridges. The iconic Nine Arch Bridge in Ella—one of Sri Lanka's most celebrated tourist landmarks—has been illuminated under a heritage monument lighting project jointly executed by the Department of Railways and the Central Cultural Fund. The 104-year-old bridge, constructed during British colonial rule. The bridge is built on an engineering design known as extradosed type, using stay cables to connect the two main pylons with the bridge deck and to share the weight of the loads from the bridge deck. In collaboration with the Central Cultural Fund (CCF), the Railway Department is set to launch a groundbreaking project featuring Sri Lanka's inaugural high-tech cable-stayed bridge, constructed with an innovative extradosed design. Spanning over 380 meters with six lanes, it extends.
