

## Switch Core Module

### Overview

SwitchCore Module is an 8-port (10/100BASE-T) Ethernet switch in an ultra-compact, modular form factor. This module, at an incredibly small size of 27.43 inches, allows advanced ethernet switching capability to be added directly to an application. All Network Switch Modules are powered by Marvell Ironman processors – the first 10G processors, developed specifically for Industry 4.0 and IoT applications, supporting TSN/HSR. Designed to deliver a full portfolio of scalable, high-performance, low-power, small-footprint, feature-rich Ethernet. There are different types of enterprise switches that perform various roles in these layer-based or hierarchical ethernet networks. Explore a wide range of HPE Aruba Networking Switch Modules models which. It is a powerful backbone switch in the center of the network core layer, which centralizes multiple aggregation switches to the core and implements LAN routing. In these switches, the data is routed and switched.
