

What router is needed for enterprise fiber optic connections

Overview

The best router for fiber internet is one that matches your plan speed, home size, and how you use your connection. Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet. It ensures consistent connectivity, enhances productivity, and reduces downtime risks. Many major ISPs, such as Verizon and Xfinity, offer fiber connections directly to your door, known as FttP or Fiber. Whether you're upgrading enterprise Wi-Fi or need a high-performance enterprise wireless router, finding the right fit is essential. It then provides multiple Ethernet ports to connect devices to the router via Ethernet cables or patch. However, you need a router capable of supporting multi-gig speeds to get fiber internet connectivity.
